
ETL job
loads item history
5
item batch 0 → 1
key 17 gets a history row
only checks that read item run again
Shared knowledge
check outcomes are keyed by table versions
E Electronics revenue
pending 6
S Store revenue
valid, no check
F spend_90d
valid, no check

item 1
ran once
E
rev 1
Repair
item key unique
fails: key 17 repeats
else invalidate
6
one filter must restore one row per key
i_is_current = 'Y'
one row per key, no key lost
i_is_current = 'N'
loses keys
i_category = 'Electronics'
key 17 still repeats
exactly one passes → regression test → publish rev 1
