ETL write 5
adds item history rows,
item version 0 → 1
commit
Check, then run
two transactions
check item key
unique
run SQL
counts item 17 twice
MAVRA
one transaction
one read-only snapshot
commit unseen
read version
item 0
reuse outcome
for item 0
run SQL
counts each item once
Later request
after the commit
reads item 1, no outcome
for it → maintain 6
time
